---

### Requirements

---

- The Store Plugin by alongubkin
- A Apache WebServer (nginx is not supported; use it at your own risk)
- PHP  $\geq 5.3 < 5.6$  (tested on 5.3 and 5.4; 5.4 is preferred; 5.5 should work; 5.6 requires a change in the CI Core files)
- php bcmath
- Access to the Store Database from the Webspace (webpanel db = store db)
- A working mysql database driver

### Important information about the tutorial

---

- Read the complete tutorial or your wont get a nice answer
- You need to have experience with Webservers (or Webhosting) - I wont explain everything in that tutorial
- I will add pictures as soon as possible

### Installation

---

**Download** a copy of the Webpanel from Github

**Extract** the zip-file to a directory on your PC

**Go to** the application/config folder

**Rename** the database.sample.php to database.php

**Open** the database.php with your preferred editor (I am using notepad++)

**Replace** the configuration with your own configuration

**Remove** the [] inside the "" (You will know what this means when you see it)

**Rename** the config.sample.php to config.php

**Open** the config.php

**Replace** the encryption key with your custom encryption key (just hit something random at your keyboard)

**Upload** all the files to your Webspace

**Import** the application/sql/ion\_auth.sql with phpmyadmin into the store database (there are a lot of tutorials on the web)

**Open** the link to your Webpanel in your browser (usually this is <http://LINK-TO-YOUR-WEBSITE/UPLOAD-DIR>)

**Login** with the default login details

- Username: [admin@admin.com](mailto:admin@admin.com)
- Password: password

**Change** the password, or everyone who knows the url to the webpanel is able to log in

+ Add a custom footer
